

AI-Powered Audit Risk Intelligence Report

Report Date: 06 April 2026, 00:06
Powered by: Groq LLaMA3 + ChromaDB + Isolation Forest

1. Executive Summary

This report presents findings from an automated AI audit analysis. A total of 1 anomalies were detected across 1 financial table(s). 0 table(s) were classified as HIGH RISK based on anomaly density. The RAG-based Q&A system analysed 0 audit question(s) against the uploaded documents.

2. Anomaly Detection Results

Source	Sheet	Rows	IF Anomalies	Z-Score Flags	Risk
test_audit_data.csv	main	11	1	0	MEDIUM

Flagged rows in: test_audit_data.csv (main)

Amount anomaly_score
5 85000.0 -0.809746

3. Document Q&A Analysis (RAG)

The following questions were automatically asked against the uploaded audit documents using a Retrieval-Augmented Generation (RAG) pipeline with Groq LLaMA3.

4. Recommendations

1. Investigate all rows flagged as HIGH RISK anomalies with the finance team.
2. Cross-reference anomalous transactions with supporting documentation.
3. Review revenue and expense entries that exceed 3 standard deviations from the mean.
4. Schedule follow-up audit for any document sections where the RAG system returned 'Not found'.
5. Re-run this analysis monthly to track trends over time.
